

ABSTRACT

NOZZLE FOR USE IN GENERATING A PRESSURE JET OF LIQUID

5 A nozzle for use in generating a pressure jet of liquid wherein the nozzle
has a proximal end for connection to a source of pressurised liquid and a
distal end at which the pressure jet is generated, characterised in that the
nozzle comprises a hollow tube having an axial lumen wherein the lumen
has a restriction at the distal end in which an orifice is formed wherein the
10 orifice has a width and an axial length, the width of the orifice being less
than that of the lumen, and wherein the hollow tube and the restriction are
integrally moulded from a plastic material.

To be accompanied, when published, by Figure 3 of the drawings.
